GEORGIA CREDIT UNION KEY DEVELOPMENTS

The U.S. economy grew at healthy but slower pace in the fourth quarter of 2018, but full-year GDP growth equaled a post-recession record. The unemployment rate remained at a very low 3.8 percent and U.S. consumer confidence remained well above long-run average readings. Strong labor market performance and tax reform have buoyed the economic expansion. With inflation right around the Federal Reserve's target rate of two percent, the Fed raised the federal funds rate from 2.25 percent to 2.50 percent in December, as expected. Overall, 2018 results reveal that the strong economy translated into solid membership growth, healthy loan growth, and high earnings for Georgia credit unions.

- Georgia credit unions reported a 0.3 percent increase in total memberships in the fourth quarter of 2018 and an increase of two percent during the year. The full-year growth was the strongest advance since 2015 and is double the rate of state population growth. In total, Georgia credit unions now report 2.2 million memberships a total which represents 21 percent of the state's population.
- Georgia credit union loan portfolios grew by 0.8 percent in the fourth quarter of 2018—a tepid 3.2 percent annualized pace—and below the 2.6 percent third quarter gain. Overall, 2018 loan growth came in at a healthy 7.4 percent, but it was lower than the 8.8 percent increase in 2017.
- Commercial loans led the way with an 11.3 percent quarterly gain and a 28.9 percent increase
 during the year. Credit card loans grew by 4 percent in the fourth quarter (16 percent annualized
 growth rate), double the 2 percent third quarter gain. This is not surprising given that U.S. holiday
 spending reached a six-year high and credit card loans led the way in financing holiday
 expenditures. Credit card loan growth for the year came in at 3.3 percent, just below the 2017
 figure of 3.8 percent.
- Asset quality remained strong in the fourth quarter of 2018. Delinquency rates increased modestly from 0.46 percent at the end of the third quarter to 0.50 percent by year-end. The year-end delinquency rate is lower than the 0.57 percent rate at the end of 2017. The Georgia credit union net chargeoff rate decreased from 0.81 percent in the third quarter of 2018 to 0.52 percent in the fourth quarter. The full-year 2018 net chargeoff rate came in at 0.58 percent, marginally higher than the 0.53 percent rate in 2017. Expectations for continued strong labor market performance signal the possibility of continued healthy asset quality.
- Savings balances decreased -0.2 percent in the fourth quarter, down from a 0.2 percent increase in the third quarter. In contrast, full-year savings growth was 2 percent the fastest increase since 2015. With savings growth slower than loan growth, the state's aggregate credit union loan-to-savings ratio increased from 83.4 percent in the third quarter of 2018 to 84.5 percent at year-end.
- Georgia credit union earnings dipped in the fourth quarter, but remained strong. This is not surprising as higher ROA earlier in the year reflects, in part, share insurance fund dividends and faster loan growth. Georgia credit unions reported annualized ROA (net income as a percentage of average assets) of 0.90 percent in the fourth quarter of 2018. This is down from 1.08 percent ROA in the third quarter of 2018. However, full-year 2018 ROA came in at 0.94 percent up from 0.76 percent in 2017.
- The Georgia credit union capital ratio increased slightly to 12.8 percent. Overall, 99 percent of all Georgia credit unions are well capitalized with net worth ratios above the 7 percent regulatory threshold level.

Executive Summary

The U.S. economy grew 2.6 percent in the fourth quarter of 2018, below both second and third quarter growth. Nonetheless, for the year, U.S. real gross domestic product (GDP) grew by a very strong rate of 2.9 percent, tied with 2015 for the fastest annual increase since 2005. However, most economists expect economic growth to fall this year and the next. Labor markets remain healthy, as unemployment fell to 3.9 percent by year-end 2018. The strong labor market is finally putting upward pressure on wages—in February, nominal average hourly wage growth rose by 3.4 percent over the past year, the fastest increase since 2009. On the other hand, despite the

strong labor market, inflation has fallen in recent months, with core consumer price index (CPI) inflation up 2.1 percent in February over the past year, and headline CPI up just 1.5 percent. Furthermore, growing concerns on the horizon—including slowing global growth, continuing trade disputes, and unsustainable corporate debt—have led the FOMC to indicate it will be "patient" with future rate increases. Credit unions continued to benefit from the strong economy in 2019, as memberships grew 4.4 percent in 2018—the fastest pace in over 30 years. However, loan growth slowed to 8.9 percent, the slowest annual increase in five years.

RECENT ECONOMIC DEVELOPMENTS

Economic Growth & Gross Domestic Product (GDP)

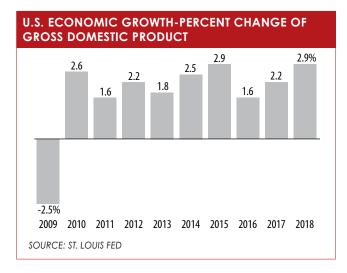

According to the Bureau of Economic Analysis (BEA), real gross domestic product (GDP) grew 2.6 percent in the fourth quarter of 2018, below growth of 3.4 percent in the third quarter and 4.2 percent in the second quarter. For the year, the U.S. economy grew at a very robust rate of 2.9 percent, tied with 2015 for the fastest growth since 2005. However, the economy has been bolstered by the recent Tax Cuts and Jobs Act of 2017, the effects of which are likely to subside in 2019. In the longer-term, slow U.S. population and productivity growth, an aging population, weaker global growth, and a ballooning U.S. federal budget deficit will put downward pressure on economic growth for the foreseeable future.

Personal consumption—which makes up about two-thirds of GDP—continues to grow at a relatively strong pace, rising 2.8 percent in the fourth quarter. While consumer confidence has fallen in recent months due to the recent government shutdown, confidence remains elevated and well above long-term averages. While representing only 3 percent to 5 percent of GDP, residential investment continues to fall, declining 3.5 percent in the fourth quarter. This is an indication of continues.

ued challenges in the housing market, with rising construction costs and labor shortages. Finally, it is noteworthy that despite the Administration's goals of reducing the trade deficit, the strong U.S. economy has led to massive increases in imports of 9.3 percent and 2.7 percent in the third and fourth quarters, respectively, well above changes in exports, which fell 4.9 percent in the third quarter before rising 1.6 percent in the fourth quarter. As imports exceed

U.S. GDP GROWTH				
Annualized Quarterly Change (%)	1Q18	2Q18	3Q18	4Q18
Real Gross Domestic Product	2.2	4.2	3.4	2.6
Personal Consumption	0.5	3.8	3.5	2.8
Durable Goods	-2.0	8.6	3.7	5.9
Private Domestic Investment	9.6	-0.5	15.2	4.6
Residential	-3.4	-1.3	-3.6	-3.5
Net Exports				
Exports	3.6	9.3	-4.9	1.6
Imports	3.0	-0.6	9.3	2.7
Government Expenditures	1.5	2.5	2.6	0.4

- exports, the trade deficit has continued to widen, although this is quite typical during economic expansions.
- Despite a strong 2018, the U.S. economy is likely to experience significantly slower growth in 2019 and 2020. This is due to several factors, including diminishing effects of recent tax cuts, slower global growth (particularly in China and Europe), continued trade tensions, and concerning levels of corporate debt. Furthermore, while economic growth may jump around from year to year, longer-term trends will begin to manifest themselves, such as the slowing population and productivity growth,

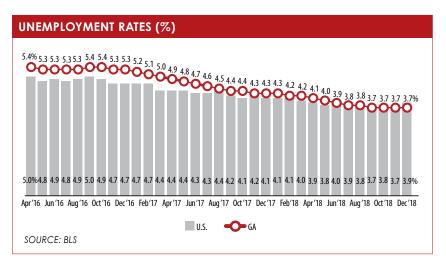

- aging population, and growing budget deficit. A recent survey of economists by the Wall Street Journal shows that, on average, economists expect GDP to grow just 2.1 percent in 2019 and 1.7 percent in 2020. In fact, 49 percent of surveyed economists expect a recession in 2020, and a full 77.8 percent expect a recession by the end of 2021. While CUNA economists do not predict a recession anytime soon, we do expect growth to slow to 2.25 percent by the end of 2019 and around 2 percent next year.
- Credit unions experienced another incredible year of growth and performance: memberships grew 4.4 percent—the fastest pace since 1986—net income (ROA) came in at 91 basis points, and delinquencies and charge-offs remain low. However, there are some indications that lending is starting to slow down slightly—credit union loan portfolios grew 8.9 percent in 2018, the slowest pace since 2013. The slowdown in lending was led by new and used auto loans which grew 11.7 percent and 9.1 percent, respectively, in 2018, a strong pace but the slowest since 2012. Moreover, credit union savings grew just 5.2 percent in 2018—well below loan growth—so the loan-share ratio rose to 85.8 percent, a near record high. Tight liquidity is likely to squeeze margins and force credit unions to increase deposit rates going forward.

Employment and the Labor Market

According to the Bureau of Labor Statistics (BLS), the U.S. economy added 277,000 jobs in October

196,000 in November and 227,000 in December, for a fourth-quarter average of 233,000 new jobs created per month. That represents very strong job creation and the most fourth-quarter jobs created since 2015. In fact, as of December 2018, there were nearly 1.2 million more open job vacancies than unemployed people searching for work, the largest gap between these two statistics since the BLS started keeping track in 2001. However, as more people began searching for

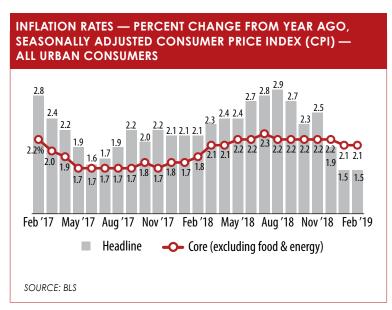

work, the unemployment rate ticked up slightly from 3.7 percent in September to 3.9 percent to end 2018. As of February 2019, the unemployment rate is at 3.8 percent.

• Fortunately, after relatively tepid wage growth, the strong labor market is finally beginning to benefit workers' incomes: after adjusting for inflation, real average weekly earnings for all employees increased 1.4 percent in 2018, the largest 12-month increase since July 2016. Moreover, the projected 12-month increases in hourly earnings for January and February 2019 are 1.9 percent and 1.6 percent, respectively, which would represent the fastest growth in earnings since 2015. This is a positive sign that the strong economy is increasing the purchasing power of the average worker, which also tends to increase consump-

GEORGIA UNEMPLOYMENT RATE TRENDS — BY MSA										
MSA	December 2018 (%)	December 2017 (%)	One-Year Change (%)

tion, thereby benefiting credit unions. On the other hand, low unemployment and higher average salaries may force credit unions to increase salary and benefits expenses to attract and retain good employees. In fact, credit unions' salary and benefits as a percentage of average assets have increase from 1.54 percent in 2011 to 1.59 percent in 2018.

- Since mid-2018, the unemployment rate in Georgia has been trending slightly under the national average. The Bureau of Labor Statistics (BLS) reports that Georgia's average unemployment rate for the fourth quarter was 3.7 percent, lower than the national average of 3.8 percent. Georgia's unemployment rate rose slightly to 3.8 percent in January 2019. Despite the tightening of the labor market, average hourly nominal private sector wages fell -0.7 percent in the fourth quarter of 2018 from \$26.95 in October to \$26.75 in December. This could indicate that there is still some slack in Georgia's labor market.
- According to the BLS, Georgia added 10,700 non-farm jobs for a total of 4,587,000 non-farm posi-
- tions in December. Employment growth between December 2017 and December 2018 was led by the following sectors: Professional and Business Services 21,900 jobs, Trade, Transportation, and Utilities 17,400 jobs, Education and Health Services 16,800 jobs, Construction 12,500 jobs, and Leisure and Hospitality 13,600 jobs.
- Unemployment has gone down in every major metropolitan area in Georgia over the past year. Nevertheless, in December unemployment remained above the national average (3.9 percent) in the following nine areas: Albany (4.6 percent), Columbus (4.4 percent), Dalton (5 percent),

Hinesville (4 percent), Macon-Bibb County (4.1 percent), and Rome (4.4 percent). The highest rates of unemployment in Georgia are found in Albany (4.6 percent), Columbus (4.4 percent), Dalton (5 percent), and Rome (4.4 percent).

Prices and Inflation

• Inflation has slowed considerably in recent months, largely driven by a steep decline in energy prices. Through December 2018, the core consumer price index (CPI)—which excludes volatile food and energy prices—was up 2.2 percent from a year earlier; however, headline CPI—which includes food and energy prices—was up just 1.9 percent. The Federal Open Market Committee's (FOMC's) preferred measure of inflation—the personal consumption expenditures (PCE) index—was up just 1.8 percent in December from a year earlier. Since then, as of February 2019, headline CPI registered an increase of just 1.5 percent from a year ago and core CPI was up 2.1 percent. Overall, the figures indicate that inflation is just below the FOMC's target of 2 percent inflation.

Housing

- The National Association of Realtors reports that, after increasing in October and November, existing home sales fell 6.4 percent in December 2018 to a seasonally adjusted annualized rate of 4.99-million-unit pace. Overall, existing home sales fell 10.3 percent over the past 12 months through December. This is likely the result of increasing mortgage rates, as the average 30-year fixed mortgage rate ended 2018 at 4.55 percent, up from 3.99 percent at the end of 2017, and well above the post-financial crisis low of 3.31 percent. Nonetheless, relatively low inventory and rising construction costs have continued to push up home values: the median existing-home price for all housing types in December was \$253,600, up a modest 2.9 percent from December 2017.
- Another indication of the slowing housing market is that for-sale properties are spending more time on the market: As of December 2018, properties typically stayed on the market for 46 days, up from 40 days a year ago. Lawrence Yun—Chief Economist of the National Association of Realtors—cites a lack of adequate inventory of lower-priced housing units and too many upper-priced units, leading to challenges for many low- and middle-income borrowers. In fact, in a recent Federal Reserve study, Fed economists found that the significant rise in student loan debt has contributed to a decline in home ownership among young adults. Whereas 45 percent of household heads ages 24 to 32 in 2005 owned their own home, just 36 percent did in 2014. The Fed economists estimate that roughly 20 percent of the decline in home ownership among young adults can be attributed to their increased student loan debts.
- New home sales finished 2018 with a strong monthly increase of 3.7 percent in December to a seasonally adjusted annual rate of 621,000, well above economists' expectations. Sales appear to be recovering from a 549,000 low in October, when activity was likely depressed by Hurricane Michael. However, new home sales were down 2.4 percent in December compared with a year earlier, as new home sales are also being affected by rising mortgage rates and relatively elevated home prices.
- According to the National Credit Union Administration's (NCUA's) call report data, credit union first mortgages rose 9.1 percent in 2018, the slowest annual increase since 2012. However, HELOCs and second mortgages rose a strong 7 percent, equal to 2017's figure, and tied with 2017 for the highest increase since before the 2007-2009 financial crisis. Elevated home values, rising construction

- costs and higher interest rates will likely contribute to slower mortgage growth throughout 2019.
- Following national trends, over the previous 12 months every major metropolitan area in Georgia saw increased home prices. The largest home price increases were in Atlanta-Sandy Springs-Alpharetta (9.2 percent), Dalton (12.3 percent), and Gainesville (10 percent). The metro areas with gaps between pre-recession prices and fourth quarter 2018 values include: Albany (-5.9 percent), Brunswick (-4.5 percent), Columbus (-8.8 percent), Hinesville (-8.9 percent), Macon (-1.9 percent), Valdosta (-5.5 percent), and Warner Robins (-1.1 percent). On the other hand, home prices in the following metro areas are above their pre-recession levels: Athens-Clarke County (16.6 percent), Atlanta-Sandy Springs-Alpharetta (21.2 percent), Augusta-Richmond (6 percent), Chattanooga (22.1 percent), Dalton (6.8 percent), Gainesville

(11.9 percent), Rome (5.7 percent), and Savannah (8.2 percent).

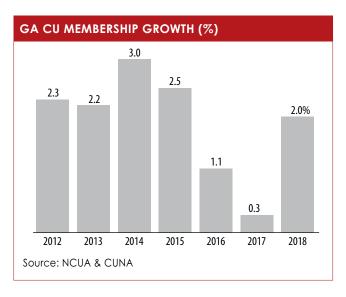

Financial Markets & Interest Rates

- In 2018, stock markets experienced their worst year since 2008, with all major indices falling 4 percent or more. December was particularly bad, with the S&P falling 9.2 percent and the Dow Jones down 8.7 percent, the worst December since 1931. The government shutdown, continued trade tensions with China, and new fears of slowing global growth all contributed to the steep decline in the stock market. However, since the beginning of 2019, the stock market has rallied impressively. In fact, both the Dow Jones and Nasdaq started the year with a nine-week winning streak—that represents the first time since 1964 that the Dow has rallied in each of the first nine weeks to start a year, and the first time ever for the Nasdaq (which was founded in 1971). By the end of February 2019, the Dow and S&P 500 had both rallied more than 11 percent and the Nasdaq was up more than 9 percent.
- In addition to the reopening of the U.S. government, stocks have been bolstered by the FOMC, which has now repeatedly expressed that it will be "patient" with further rate increases. In December, the FOMC increased the federal funds rate from a range of 2 percent to 2.25 percent, to a range of 2.25 percent to 2.50 percent; however, since then FOMC Chairman Jerome Powell has stated that "It may be some time before the outlook for jobs and inflation calls clearly for a change in [interest rate] policy." As of their last meeting in March eleven of the seventeen FOMC officials did not think a rate increase would be needed at all in 2019. The Fed also announced that in May it would slow the pace at which it is shrinking its \$4 trillion asset portfolio and end the runoff of its Treasury holdings at the end of September.
- After a recent high of 3.22 percent in November 2018, the yield on the 10-year Treasury fell to 2.69

percent to end 2018 and was at 2.61 percent as of March 19, 2019. Concerns about slower economic growth and lower inflation have put downward pressure on Treasury yields. Furthermore, the yield curve—or spread between long- and short-term interest rates—has fallen considerably. As of March 19, 2019, the 2-year Treasury yield was 2.46 percent, just 15 basis points lower than the 10-year Treasury. The remarkably small difference between these rates puts pressure on credit union interest margins and is an oft-cited indicator that a recession may be looming in the not-too-distant future.

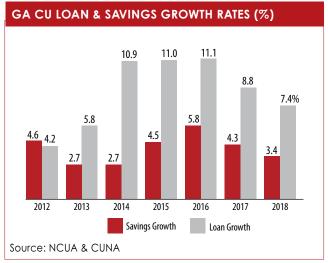

CREDIT UNION RESULTS

• The U.S. economy grew at healthy but slower pace in the fourth quarter of 2018, but full-year GDP growth equaled a post-recession record. The unemployment rate remained at a very low 3.8 percent and U.S. consumer confidence remained well above long-run average readings. Strong labor market performance and tax reform have buoyed the economic expansion. With inflation right around the Federal Reserve's target rate of two percent, the Fed raised the federal funds rate from 2.25 percent to 2.50 percent in December, as expected. Overall, 2018 results reveal that the strong economy translated into solid membership growth, healthy loan growth, and high earnings for Georgia credit unions.

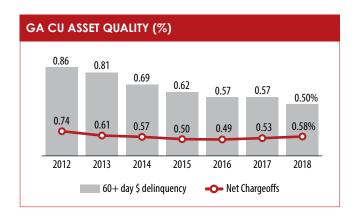

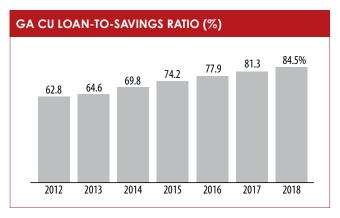

Growth

- Georgia credit unions reported a 0.3 percent increase in total memberships in the fourth quarter of 2018 and an increase of two percent during the year. The full-year growth was the strongest advance since 2015 – and is double the rate of state population growth. In total, Georgia credit unions now report 2.2 million memberships – a total which represents 21 percent of the state's population.
- Nationally, memberships increased by 0.9 percent in the fourth quarter a bit faster than the Georgia advance and faster than our expectations. National increases (like those we've generally reported in Georgia) continue to outpace population gains by a wide margin.
- Georgia credit union loan portfolios grew by 0.8 percent in the fourth quarter of 2018—a tepid 3.2 percent annualized pace—and below the 2.6 percent third quarter gain. Overall, 2018 loan growth came in at a healthy 7.4 percent, but it was lower than the 8.8 percent increase in 2017.

- Commercial loans led the way with an 11.3 percent quarterly gain and a 28.9 percent increase during the year. Credit card loans grew by 4 percent in the fourth quarter (16 percent annualized growth rate), double the 2 percent third quarter gain. This is not surprising given that U.S. holiday spending reached a six-year high and credit card loans led the way in financing holiday expenditures. Credit card loan growth for the year came in at 3.3 percent, just below the 2017 figure of 3.8 percent.
- At the portfolio level, it is important to note that the Mortgage Bankers Association March 21st, 2019 forecast calls for the dollar amount of 1-4 family first mortgage originations to increase by 1 percent in 2019 and by 1.4 percent in 2020. Nationally, first mortgages represent 41 percent of total credit union loans and in Georgia they represent 32 percent of total loans.
- IHS Markit's March 2019 forecast calls for new auto loan sales to decline by 2.3 percent in 2019 (following an increase of 0.3 percent in 2018) and to decline by 1 percent in 2020. Nationally, new autos represent 14 percent of total credit union loans and in Georgia they represent 20 percent of total loans.
- Looking forward, it seems reasonable to expect a continuation of healthy membership growth and solid (but lower) loan portfolio growth. Nationally, CUNA economists see credit union loan balances increasing by 7.8 percent in 2019 (down from 8.9 percent in 2018) and by 7 percent in 2020. As noted in our analysis last quarter, we expect a generally favorable lending environment over the forecast horizon with little change in market interest rates, healthy labor markets, and rising wages. In addition, in the aggregate, consumer balance sheets are in great shape, with debt-to-income ratios near cyclical lows and debt-payment-to-income ratios very close to all-time lows.
- On the liability side of the balance sheet, savings balances decreased -0.2 percent in the fourth quarter, down from a 0.2 percent increase in the third quarter. Certificates were up four percent in the three-month period (a 16 percent annualized gain), while each of the other four savings portfolios declined in the quarter. The full-year increase in Georgia credit union savings balances was 3.4 percent which fell below the 2017 result of 4.3 percent. Share drafts gained the most during the year, increasing by 6.7 percent, while certificates were up 4.3 percent and regular shares increased 3.9 percent. Money market shares increased, but only by 1.7 percent in the year. IRAs declined by 3.9 percent.
- CUNA economists expect savings growth to pick up over the forecast horizon as credit unions seek to boost liquidity modestly. In our baseline scenario we see credit union savings balances increasing by 6 percent in 2019 (up from 5.2 percent in 2018) and by 6.5 percent in 2020.

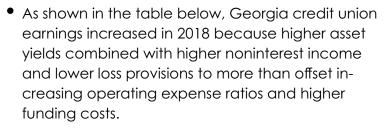

Risk Exposure

- Asset quality remained strong in the fourth quarter of 2018. Delinquency rates increased modestly from 0.46 percent at the end of the third quarter to 0.50 percent at year-end. The year-end delinquency rate is lower than the 0.57 percent rate at the end of 2017. The Georgia credit union net chargeoff rate decreased from 0.81 percent in the third quarter of 2018 to 0.52 percent in the fourth quarter. The full-year 2018 net chargeoff rate came in at 0.58 percent, marginally higher than the 0.53 percent rate in 2017. Expectations for continued strong labor market performance signal the possibility of continued healthy asset quality.
- With savings growth slower than loan growth, the state's aggregate credit union loan-to-savings ratio increased from 83.4 percent in the third quarter of 2018 to 84.5 percent at year-end.
- The Georgia aggregate loan-to-savings ratio is over ten percentage points higher than the level we reported in 2015 and sits at its highest level in nearly forty years (the ratio was 89 percent in 1979). While most credit unions reflect ample liquidity in the current environment, this trend is likely to receive increased exam and supervisory attention going forward. As market interest rates drift up there will undoubtedly be more pressure to raise deposit yields to slow additional outflows into money market mutual funds. At the same time, the Federal Reserve's new liquidity requirements may mean that large banks will be more obviously seeking retail deposits so pricing pressures might be especially pronounced in the coming months.
- Georgia credit union net long term assets declined marginally, finishing the year at 26 percent of total assets. That reading remans a bit lower than the 33.1 percent national average, and it is down slightly from the state's 27.6 percent reading at the start of the year. It also is well below the Georgia credit union cyclical high of 31.4 percent reported at the end of 2013. Overall, credit unions in Georgia appear ready for higher interest rates and don't reflect outsized exposure to interest rate risk.

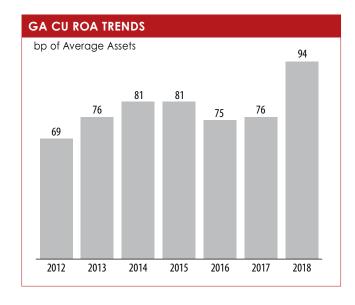

Earnings Results

 Georgia credit union earnings dipped in the fourth quarter but remained strong. This is not surprising as higher ROA earlier in the year reflects, in part, share insurance fund dividends and faster

loan growth. Georgia credit unions reported annualized ROA (net income as a percentage of average assets) of 0.90 percent in the fourth quarter of 2018. This is down from 1.08 percent ROA in the third quarter of 2018. However, full-year 2018 ROA came in at 0.94 percent up from 0.76 percent in 2017.

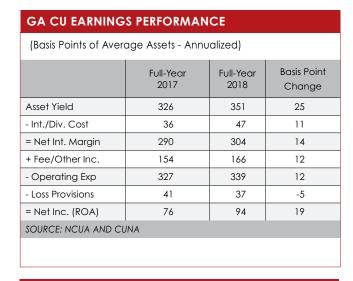

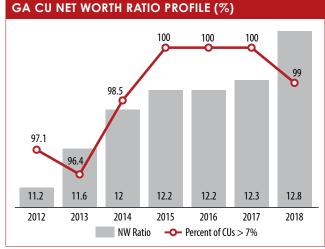

credit union asset size. Georgia credit union fullyear ROA ranged from a low of 0.50 percent at institutions with between \$20 million and \$50 million in total assets to a high of one percent at the state's seven credit unions with \$1 billion or more in total assets.

- Modest pressure on both interest margins and non-interest margins should be more obvious in 2019 while operating expense ratios will likely drift up as personnel costs mount. The bottom-line effects of these will likely be obvious – but not overwhelming. CUNA economists expect national-level earnings to decline from the full-year 2018 reading of 0.91 percent to 0.80 percent in 2019 and at 0.75 percent in 2020.
- Notwithstanding these challenges, economic fundamentals are strong, consumers are engaged, and many seem ready, willing, and able to borrow. Loan growth will almost certainly decline over the next eighteen months but most credit unions should continue to enjoy decent portfolio increases and healthy earnings results.

Capital Adequacy

- The Georgia credit union capital ratio increased slightly from 12.6 percent at the start of the fourth quarter to 12.8 percent by year-end. Overall, 99 percent of all Georgia credit unions are well capitalized with net worth ratios above the 7 percent regulatory threshold level
- Georgia credit union net worth ratios remain above ten percent in each of the seven broad asset categories we track – ranging from a low of 10.3 percent among credit unions with \$250 to \$500 million in assets to a high of 17.6 percent in the smallest asset category (i.e., <\$20 million).

SPECIAL FOCUS

Credit unions and Diversity, Equity, and Inclusion

Credit unions have a long history of serving diverse and underserved communities. This goes back to their founding mission to promote thrift and provide access to credit for provident purposes, especially for people of modest means.

It is also consistent with credit unions' "people helping people" philosophy and unique structure: member-owned, democratically controlled, and not-for profit. This ensures credit unions' success is bound up in the success of their members and communities.

Credit unions benefit from a rich legacy that supports diversity, equity, and inclusion (DEI). DEI matters for credit unions now more than ever because multicultural consumers accounted for 100 percent of U.S. population growth and 61 percent of credit union growth over the past five years, according to research by CUNA Mutual Group.¹

This trend will continue, according to U.S. Census population projections, making it a critical market for credit unions. To stay relevant, credit unions must reach more diverse and often underserved populations, and they must continue to improve and tailor products and services to the needs of this rapidly growing group.

In addition, newly elected congressional leaders, as well as regulators, have made it clear that they care about deepening financial inclusion for diverse and underserved populations. Representative Maxine Waters, Chair of the House Financial Services Committee recently established a Subcommittee on Diversity and Inclusion and all indications are that they will increase scrutiny on regulators and regulated entities when it comes to diversity and inclusion.

How are credit unions faring when it comes to diversity, equity, and inclusion?²

CUNA recently completed research on CEO gender at credit unions and banks and found that 52 percent of credit union CEOs are women.³ This is good news and significant in its own right, but it's especially compelling when compared to banks where only 5 percent of bank CEOs are women. Results from Georgia align with national-level results; 52 percent of Georgia credit union CEOs are women.

CUNA's research also finds that a CEO of a larger credit union (\$1-\$3 billion) is more than three times more likely to be a woman than a CEO of a comparable sized bank. However, at both banks and credit unions female CEOs are more common at smaller institutions, so we still have more work to do to ensure that the glass ceiling for women CEOs at credit unions is broken.

In addition to diversity within credit unions, credit unions are reaching and serving diverse populations through the 551 Minority Depository Institution (MDI) credit unions⁴ that serve 3.9 million members (3.5 percent of credit union memberships), represent 9.9 percent of the total number of credit unions, and hold 2.7 percent of total credit union assets.

MDI credit unions represent a significant proportion of credit unions and their assets, especially when compared to the more modest number of MDI banks (152). MDI banks represent 2.8 percent of the total number of banks and hold a mere 1.3 percent of total bank assets.

In Georgia, there are 13 MDI credit unions (12.5 percent of Georgia credit unions) that serve 41,767 (1.9 percent of Georgia credit union members) and hold \$225 million in assets (0.94 percent of Georgia credit union assets).

² For a more comprehensive discussion and for additional data on DEI at credit unions please see https://news.cuna.org/articles/115535-trendlines-reaching-and-serving-diverse-populations

³ van Rijn, Jordan. "Credit Unions and CEO Gender." CUNA Issues Brief, November 2018. https://www.cuna.org/uploadedFiles/Global/About_Credit_Unions/CEO%20Gender%20Policy%20Brief%20-%2011-21-18.pdf

⁴ MDI credit unions are those where more than 50% of their current membership, potential membership, and board members are minorities.

SPECIAL FOCUS (continued)

CUNA estimates that MDI credit unions generate significant benefits for their members. Between September 2017 and September 2018, MDI credit unions provided \$314 million in direct financial benefits to MDI credit union members. These benefits are equivalent to \$174 per household.

A commitment to diverse communities

Through participation in other designations and certifications such as the low-income designation, community development credit union certification, Community Development Financial Institution certification, the Juntos Avanzamos designation—and by taking advantage of resources such as Coopera—credit unions are further demonstrating a commit-

ment to serve diverse and underserved communities.

In Georgia, 43 credit unions (41.3 percent of Georgia credit unions) are low-income designated, they have 641,170 members (29.7 percent of Georgia credit union members) and hold \$5.8 billion in assets (24.2 percent of Georgia credit union assets).

Despite field of membership restrictions, credit unions are doing a good job of reaching and serving diverse populations—but there is room to do better.

Credit unions that reach these populations successfully use innovative products and services that meet the needs and demands of their diverse communities, such as ITIN loans, small dollar loans, emergency loans/payday alternative loans, and small business loans.
